# Interactive Resume Builder (Task 29)

A form-driven resume builder with a **live preview** that updates on every input event and a **print-f
Built during my Web Development internship at **Veda Technology**.

## Features
- Form for personal info, skills, education and experience
- Live preview panel (two-way data binding using the `input` event)
- Add / remove education and experience entries
- Skill bars chart (`HTML:90, CSS:85` becomes progress bars)
- Import / export resume data as **CSV**
- Print-specific stylesheet (`print.css`) to save as PDF
- Auto-saves in the browser (localStorage)

## Tech Stack
HTML5, CSS3, JavaScript (vanilla)

## Folder Structure
```
resume-builder/
|-- index.html
|-- css/
|   |-- style.css      # screen styles
|   `-- print.css      # print / PDF styles
|-- js/
|   `-- script.js      # binding, preview, CSV, print
|-- data/
|   `-- sample-resume.csv
|-- screenshots/       # add your screenshots here
`-- README.md
```

## How to Run
1. Clone: `git clone https://github.com/<your-username>/resume-builder.git`
2. Open the folder in VS Code and run **Live Server** on `index.html`
   (Live Server is needed only for "Load Sample CSV"; the rest works by double-clicking `index.html`).

## How to Export PDF
Click **Print / Save PDF**, choose **Save as PDF**, turn off *Headers and footers*, then Save.

## Learning Outcomes
Two-way data binding, live rendering, dynamic DOM lists, print CSS, CSV handling.
